Hero Images/Getty Images Science is usually a very interesting topic for children because of their inherently interesting nature. They want to know how and why everything works. Learning uses children's curiosity to learn more about the world around them. Every time they explore a scientific concept - even if they don't realize that what they're doing - they increase their knowledge and appreciation for this world. To motivate students to engage in research: Encourage them to ask questions when they don't understand something. Provide many opportunities for practical exploration, such as regular wildlife exploration. Buy simple scientific equipment and kits for children to explore. Share your observations with your children, pointing to things like interesting rocks, unusual insects or various birds. Talk about the weather and the causes of rain, snow, fog, earthquakes or hurricanesGo your own experiments and encourage students to record their findings And, of course, use these free forms to print to encourage exploration and recording of research results in the classroom or home school. Use this form when you start to have students research the topic of their choice. Encourage your children to list new facts they discover, not interesting facts they already know. For example, if they are studying an animal, they may already know its physical attributes, but may not know about its diet or natural habit. Students use this scientific report form to draw a picture of their subject and write a report on it. Get your children to be as specific as possible, as expected by their age and skills. If you draw a flower, for example, a small child can contain and mark the stem, flowers and petals, while the older student can also contain a stamen, anther and filament. Use this form to enumerate the resources used for research. The form contains blank lines for students to list books and websites. You can also have them list magazines or DVD titles, the name of the place you visited on a field trip on the subject, or the name of the person you interviewed. In the previous form, the student listed the resources she used in her research. In this form, specific discoveries and interesting facts can be exchanged with each of these resources. If your student is going to write a report about it, this form is great to fill out as she reads (or watches DVDs or interviews someone) about each of the resources so that she can refer to those sources when composing her report. Use this page when conducting scientific experiments. Tell students to list the title of the experiment, the materials they use, the questions they hope to answer by doing the experiment, their hypothesis (what they think will happen), and their method (what exactly they did for the project). This form is an excellent practice for laboratory reports in high school. Encourage be as detailed as possible. When describing a method, ask them to include enough details so that the person who did not perform the experiment can repeat it successfully. Use this form to help young students draw a picture of the experiment, record results, and describe what they have learned. Use this form when researching the human body. Students will do research to answer questions and draw a picture of what the inside of their bodies looks like. Animals are a very interesting topic for young children. Print multiple copies of this form to record facts about the animals your student is interested in or those you observe on nature walks or field trips. Students can use this form to draw a picture of each animal they study and record interesting facts they have learned. You can print these pages on tabs and punch them to assemble the animal fact book in a folder or binder. Whether you're a teacher or a student, you can organize for the coming school year with these special purpose calendars. Print or download the free template from one or more of the pages listed below. If you click on a page, you'll find that most of these sites will be updated before the new school year.
